In other words, imagining how to use a pen as a blowpipe does not rest on our ability to remember a specific event in which we needed a blowpipe. Wiley Interdiscip.

Age-related changes in prefrontal and hippocampal contribution to relational memory. This is interesting as 9-months has been consistently described by memory theorists as a critical transitional age whereby infant memory appears to undergo a radical development. Thus in phase 3, the presence of puppet A was presumed to activate the associated memory of puppet B, while the distinctive context was presumed to activate the associated memory of the mobile.

Episodic-like memory in animals: psychological criteria, neural mechanisms, and experimental paradigms. We move next to tasks that have used two-room methodologies e.
