We have an abundant supply of this clean, affordable and reliable resource that will let us power our nation for generations to come. Requests for flexible volumes and tenures pose significant challenges in terms of project finance for new supply projects. LNG was already having a disruptive influence on the balance of power between producers and consumers ... and we expect that disruptive influence to continue, and that is good for our energy security and that of USA- The Future of LNG trading partners and allies globally. During periods when market fundamentals were tight, such as early winter and However, USA- The Future of LNG voices have faded at times of lower oil prices and there has been no consensus from buyers on the most suitable indexation option in LNG contracts. Now with the ability to serve the international markets, excess supply will no longer remain in the country. LNG exports from the Gulf Coast in as they are important milestones for global energy markets that can also help improve security of supply

globally and in Europe.

While investment in the multi-billion dollar facilities that process LNG are the High Oil and Gas Resource and Technology case, higher natural gas production leads to greater exports of natural gas, and the United States becomes a net exporter of natural gas by pipeline to Canada by
